

Requirements Gathering Brief: 'Community Connect' App

① Interview Summary:

~~Stakeholders~~

Stakeholder: Community Event Organizer

(Fictional Persona: Priya, age 35)

Interview Format: 30-minute Q&A (mocked)

Key Question Asked:

- What is the main goal of the app?
- What types of events will it support?
- What features are most important to you?
- How do you currently manage events?
- Who are the intended users (organizers/attendees)?
- What platforms should the app run on?
- Any privacy or budget concerns?

② Key Requirements Identified:

Functional Requirements:

- User registration and login (organizers & attendees)
- Create, edit and delete events.
- RSVP and check-in system.
- Event calendar and map integration.
- Notifications/reminders for upcoming events.

- Share events via social media/email
- Feedback and rating system

Non-Function Requirements:

- Mobile-first responsive design
- App should handle 10,000+ concurrent users.
- Data must be securely stored (GDPR compliance)
- 99.9% uptime expected
- Load time under 2 seconds

③ Documentation & Tracing Approaches

→ Tools used:

- Documentation: Google Docs / Microsoft Word
- Requirement Traceability Matrix (RTM): Excel sheet
- Diagrams: Use Case & User Flow Diagrams (drawn using Lucidchart)

→ Traceability Strategy:

- Each requirement is assigned a unique ID (e.g., FR-01, NFR-02)
- Mapped to corresponding use cases, test cases and features.
- Regular updates via Agile sprint backlog
